36 Vaccinations for adult horse

****ALL VACCINATION PROGRAMS SHOULD BE DEVELOPED IN CONSULTATION WITH A LICENSED VETERINARIAN****

RISK-BASED VACCINES are selected for use based on risk assessment** performed by, or in consultation with, a licensed veterinarian. Use of these vaccines may vary between individuals, populations, and/or geographic regions. Note: Vaccines are listed in this table in alphabetical order, not in order of priority for use.

	Broodmares	Other Adult Horses (>1 year of age) <i>previously vaccinated against the disease indicated</i>	Other Adult Horses (>1 year of age) <i>unvaccinated or lacking vaccination history</i>	
Disease				Comments
Tetanus	<i>Previously vaccinated:</i> Annual, 4-6 weeks pre-partum <i>Previously unvaccinated or having unknown vaccination history:</i> 2-dose series: 2nd dose 4-6 weeks after 1st dose. Revaccinate 4-6 pre-partum	Annual	2-dose series: 2nd dose 3-4 weeks after 1st dose. Annual revaccination	Booster at time of penetrating injury or prior to surgery if last dose was administered over 6 months previously.
Eastern/ Western Equine Encephalomyelitis (EEE/WEE)	<i>Previously vaccinated:</i> Annual, 4-6 weeks pre-partum <i>Previously unvaccinated or having unknown vaccination history:</i> 2-dose series: 2nd dose 4-6 weeks after 1st dose. Revaccinate 4-6 pre-partum	Annual-spring, prior to onset of vector season.	2-dose series: 2nd dose 3-4 weeks after 1st dose. Revaccinate prior to the onset of the next vector season.	Consider 6-month revaccination interval for: 1) Horses residing in endemic areas 2) Immunocompromised horses
West Nile Virus (WNV)	<i>Previously vaccinated:</i> Annual, 4-6 weeks pre-partum <i>Unvaccinated or lacking vaccination history:</i> It is preferable to vaccinate naïve mares when open. In areas of high risk, initiate primary series as described for unvaccinated adult horses.	Annual-spring, prior to onset of vector season.	<i>Inactivated whole virus vaccine:</i> 2-dose series: 2nd dose 4-6 weeks after 1st dose. Revaccinate prior to the onset of the next vector season. <i>Recombinant canary pox vaccine:</i> 2-dose series: 2nd dose 4-6 weeks after 1st dose. Revaccinate prior to the onset of the next vector season. <i>Inactivated flavivirus chimera vaccine:</i> 2-dose series: 2nd dose 4-6 weeks after 1st dose. Revaccinate prior to the onset of the next vector season.	
Rabies	Annual, 4-6 weeks pre-partum OR prior to breeding*	Annual	Single dose: Annual revaccination	*Due to the relatively long duration of immunity, this vaccine may be given post-foaling but prior to breeding and thus reduce the number of vaccines given to a mare pre-partum.

	Broodmares	Other Adult Horses (>1 year of age) <i>previously vaccinated against the disease indicated</i>	Other Adult Horses (>1 year of age) <i>unvaccinated or lacking vaccination history</i>	
Disease				Comments
Anthrax	Not recommended during gestation	Annual	2-dose series: 2nd dose 3-4 weeks after 1st dose. Annual revaccination Do not administer concurrently with antibiotics.	Use caution during storage, handling and administration. Consult a physician immediately if human exposure to vaccine occurs by accidental injection, ingestion, or otherwise through the conjunctiva or broken skin.
Botulism	<i>Previously vaccinated:</i> Annual, 4-6 weeks pre-partum <i>Previously unvaccinated or having unknown vaccination history:</i> 3-dose series: 1st dose at 8 months gestation. 2nd dose 4 weeks after 1st dose. 3rd dose 4 weeks after 2nd dose.	Annual	3-dose series: 2nd dose 4 weeks after 1st dose. 3rd dose 4 weeks after 2nd dose. Annual revaccination	
Equine Herpesvirus (EHV)	3-dose series with product labeled for protection against EHV abortion.	Annual (see comments)	3-dose series: 2nd dose 4-6 weeks after 1st dose. 3rd dose 4-6 weeks after 2nd dose.	Consider 6-month revaccination interval for: 1) Horses less than 5 years of age 2) Horses on breeding farms or in contact with pregnant mares 3) Performance or show horses at high risk
Equine Viral Arteritis (EVA)	Not recommended unless high risk	Annual <i>Stallions, teasers:</i> Vaccinate 2-4 weeks before breeding season <i>Mares:</i> Vaccinate when open	Single dose: Annual revaccination	<u>Prior to initial vaccination, intact males and any horses potentially intended for export should undergo serologic testing</u> and be confirmed negative for antibodies to EAV. Testing should be performed shortly prior to, or preferably at, the time of vaccination.

38 Vaccinations for adult horse

	Broodmares	Other Adult Horses (>1 year of age) <i>previously vaccinated against the disease indicated</i>	Other Adult Horses (>1 year of age) <i>unvaccinated or lacking vaccination history</i>	
Disease				Comments
Influenza	<p><i>Previously vaccinated: <u>Inactive vaccine</u>: Semi-annual with one dose administered 4-6 weeks pre-partum</i></p> <p><i><u>Canary pox vector vaccine</u>: Semi-annual with one dose administered 4-6 weeks pre-partum</i></p> <p><i>Previously unvaccinated or having unknown vaccination history: <u>Inactive vaccine</u>: 3-dose series: 2nd dose 4-6 weeks after 1st dose. 3rd dose 4-6 weeks pre-partum</i></p> <p><i><u>Canary pox vector vaccine</u>: 2-dose series: 2nd dose 4-6 weeks after 1st dose but no later than 4 weeks pre-partum</i></p>	<p>Horses with ongoing risk of exposure: Semi-annual</p> <p>Horses at low risk of exposure: Annual.</p>	Single dose: Annual revaccination	<p><i><u>Modified live vaccine</u>: Single dose administered intranasally. Revaccinate semi-annually to annually</i></p> <p><i><u>Inactivated vaccine</u>: 3-dose series: 2nd dose 4-6 weeks after 1st dose. 3rd dose 3-6 months after 2nd dose. Revaccinate semi-annually to annually</i></p> <p><i><u>Canary pox vector vaccine</u>: 2-dose series: 2nd dose 4-6 weeks after 1st dose. Revaccinate semi-annually</i></p>
Leptospirosis	<p>Safe for use in pregnant mares</p> <p><i>Previously unvaccinated or having unknown vaccination history: 2 initial doses 3-4 weeks apart</i></p> <p>Previously vaccinated: Annual revaccination</p>	Annual	2 initial doses 3-4 weeks apart. Annual revaccination	Field safety testing has demonstrated this product is safe for use in pregnant mares
Potomac Horse Fever (PHF)	Not recommended unless high risk	Semi-annual to annual	2-dose series: 2nd dose 3-4 weeks after 1st dose. Semi-annual or annual booster	A revaccination interval of 3-4 months may be considered in endemic areas when disease risk is high.
Rotavirus	3-dose series: 1st dose at 8 months gestation. 2nd and 3rd doses at 4-week intervals thereafter	Not applicable	Not applicable	
Snake Bite	Please see guidelines for additional information			

	Broodmares	Other Adult Horses (>1 year of age)	Other Adult Horses (>1 year of age)	
		<i>previously vaccinated against the disease indicated</i>	<i>unvaccinated or lacking vaccination history</i>	
Disease				Comments
Strangles <i>Streptococcus equi</i>	<p><i>Previously vaccinated: Killed vaccine containing M-protein: Semi-annual with one dose given 4-6 weeks pre-partum</i></p> <p><i>Previously unvaccinated or having unknown vaccination history: Killed vaccine containing M-protein: 3-dose series: 2nd dose 2-4 weeks after 1st dose. 3rd dose: 4-6 weeks pre-partum</i></p>	Semi-annual to annual	<p><i>Killed vaccine containing M-protein: 2-3 dose series: 2nd dose 2-4 weeks after 1st dose. 3rd dose (where recommended by manufacturer) 2-4 weeks after 2nd dose. Revaccinate semi-annually</i></p> <p><i>Modified live vaccine: 2-dose series administered intranasally; 2nd dose 3 weeks after 1st dose. Revaccinate semi-annually to annually</i></p>	Vaccination is not recommended as a strategy in outbreak mitigation.

Vaccinations for Adult Horses was developed by the American Association of Equine Practitioners Infectious Disease Committee, 2008 and updated by the AAEP Biological & Therapeutic Agents Committee in 2012 and again updated by an AAEP Vaccination Guidelines Review Task Force in 2015.
